Ex 4: Information Retrieval using NLTK

Learning Objective:

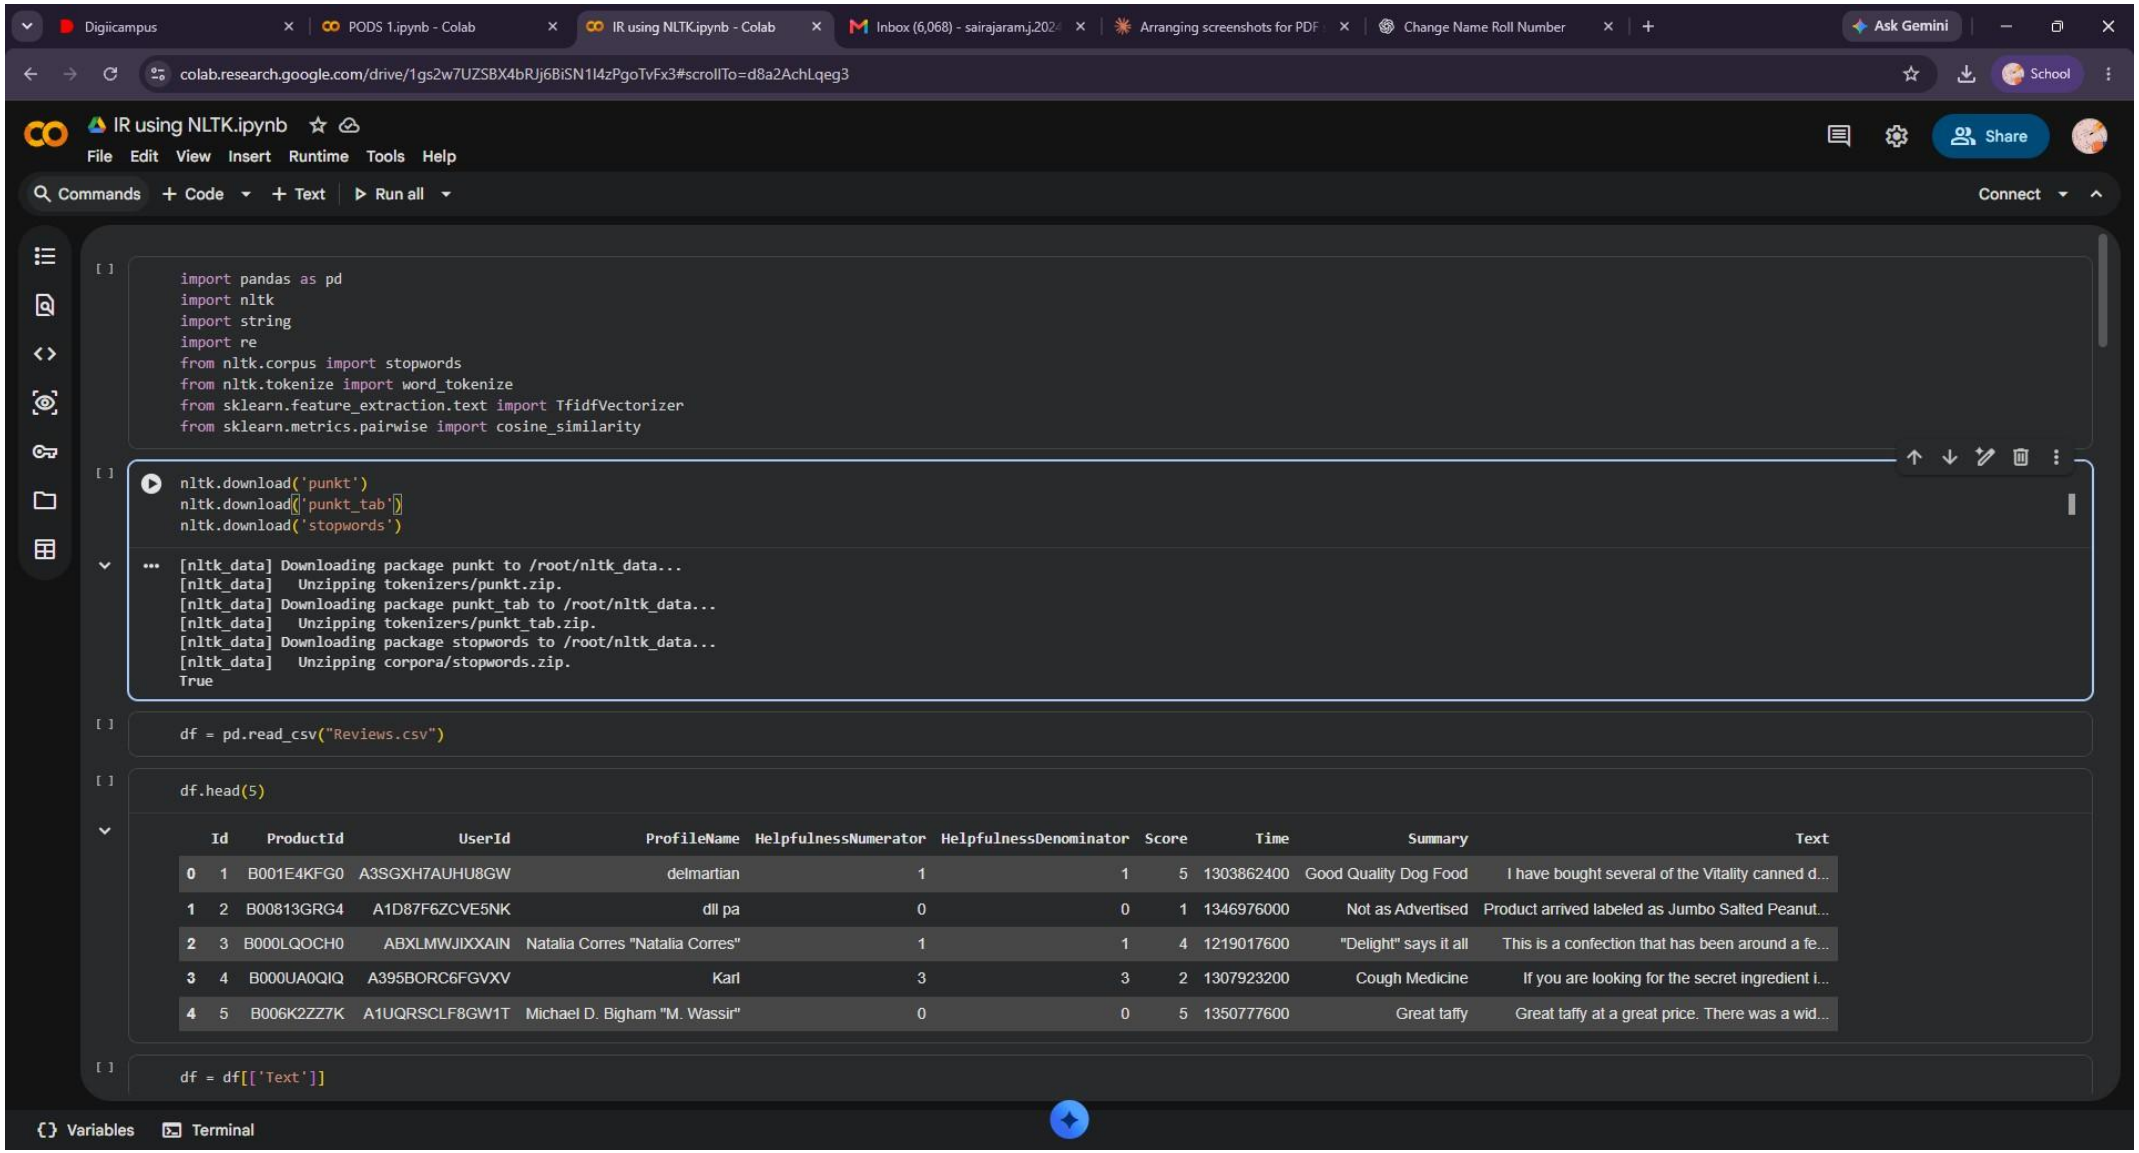

The objective of this experiment is to enable students to understand the text preprocessing pipeline and implement a basic information retrieval system using TF-IDF vectorization, Cosine Similarity, NLTK.

Problem Statement:

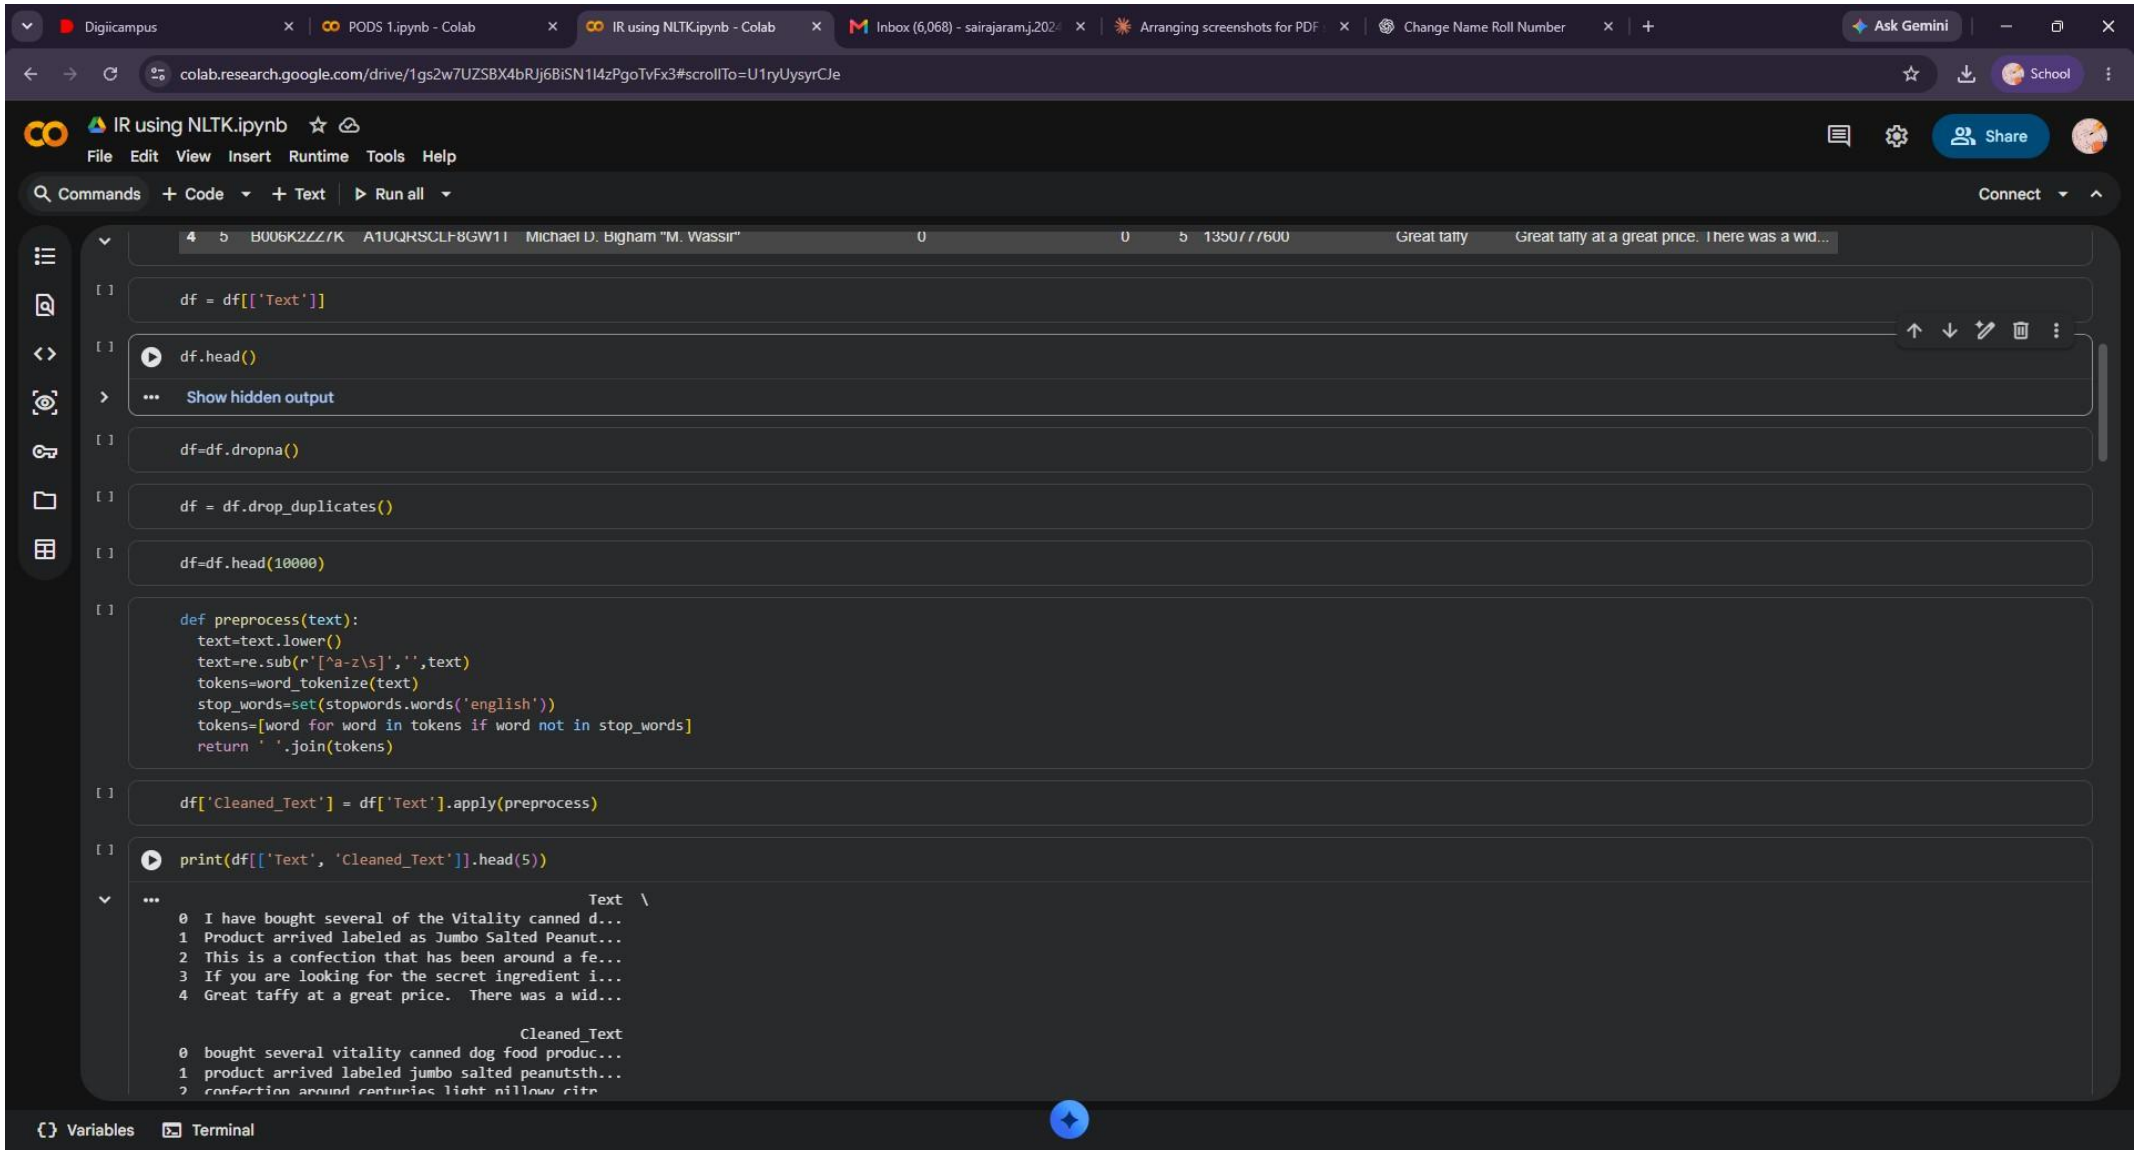

An e-commerce company receives thousands of customer reviews for its products every day. Customer support executives often need to retrieve reviews that are similar to a user's search query to quickly understand customer feedback and address common concerns.

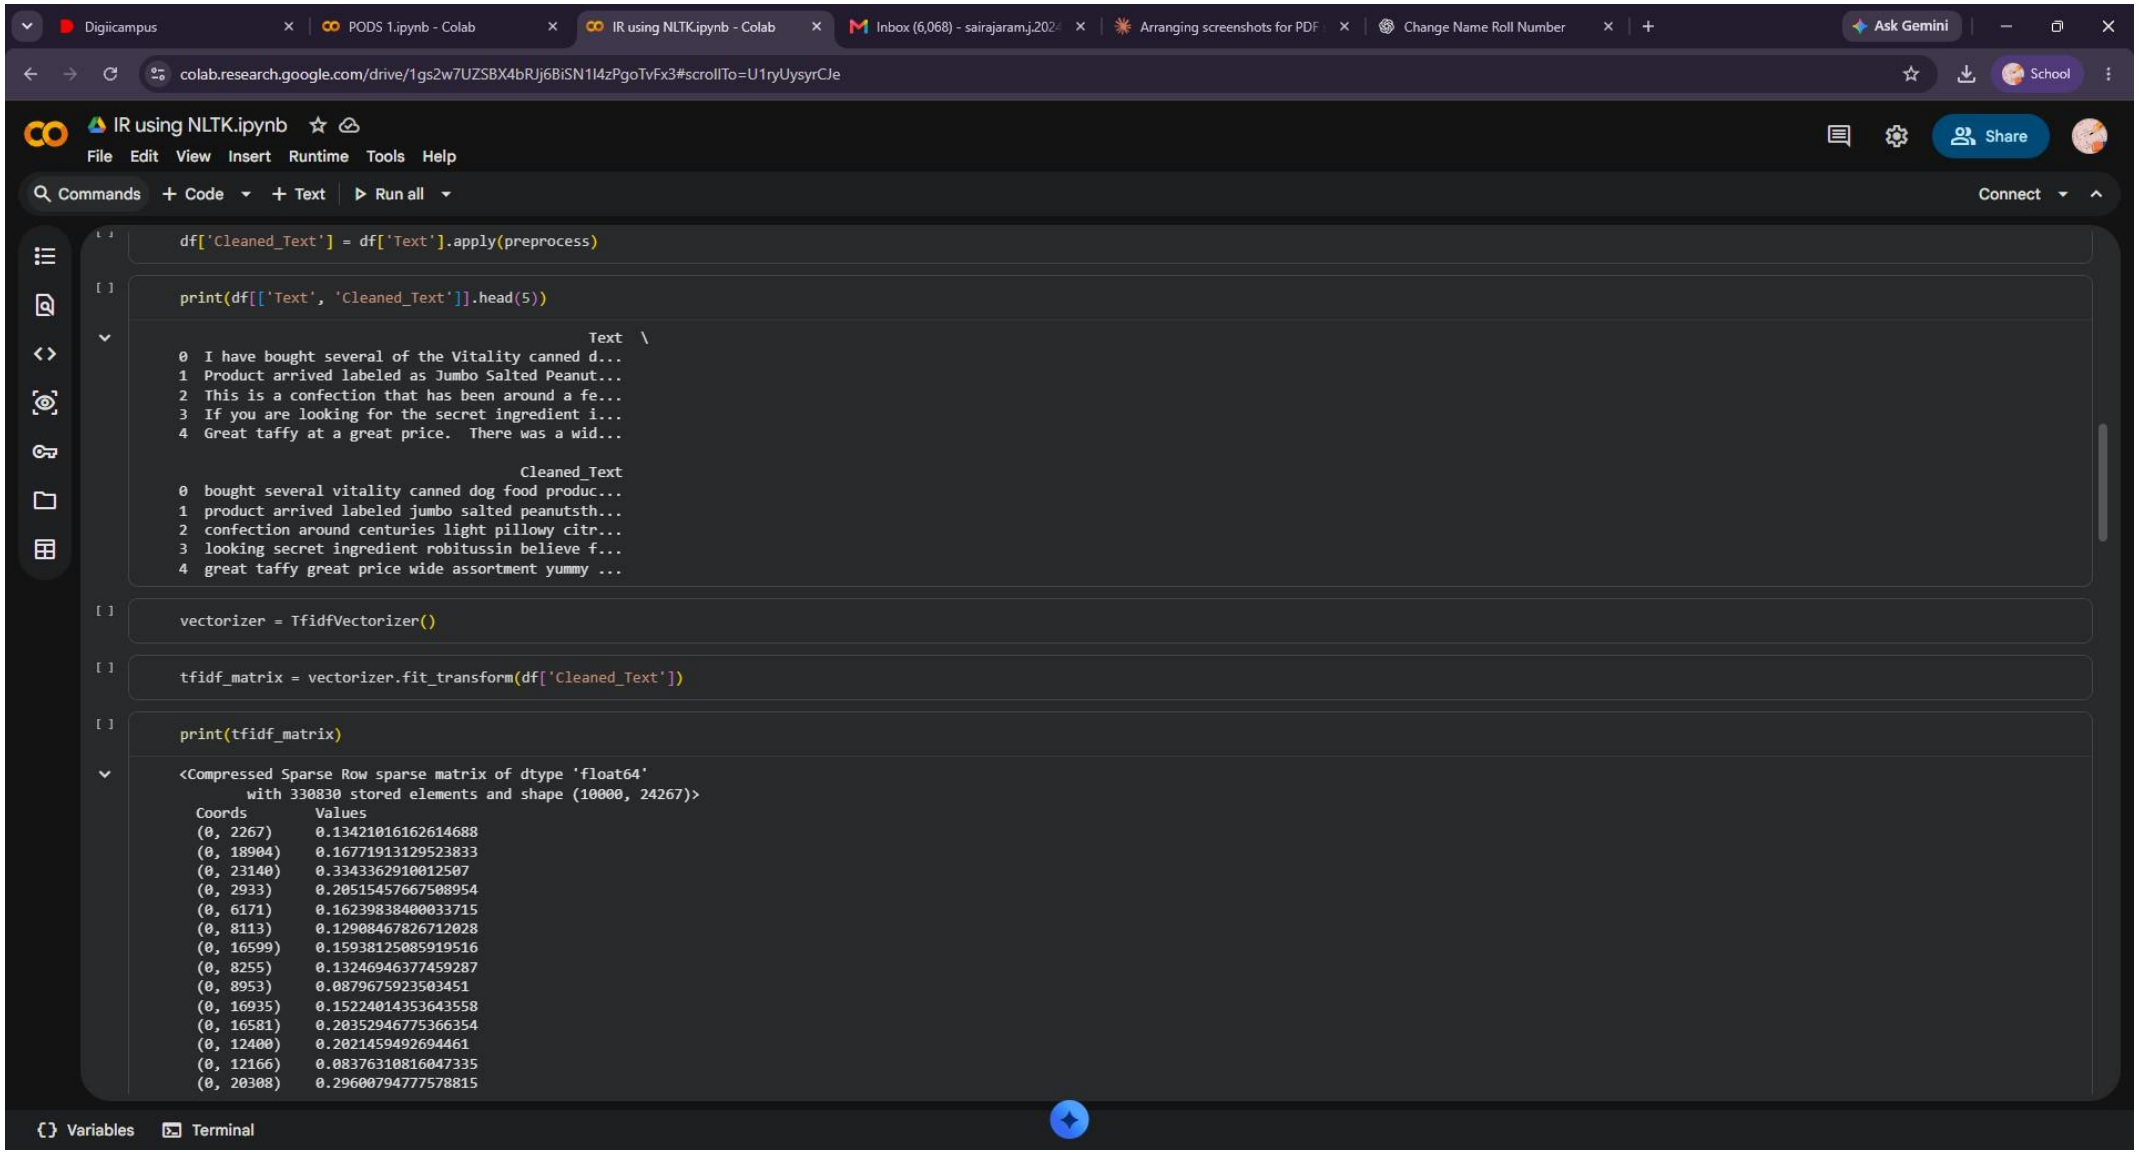

Implementation Evidence:

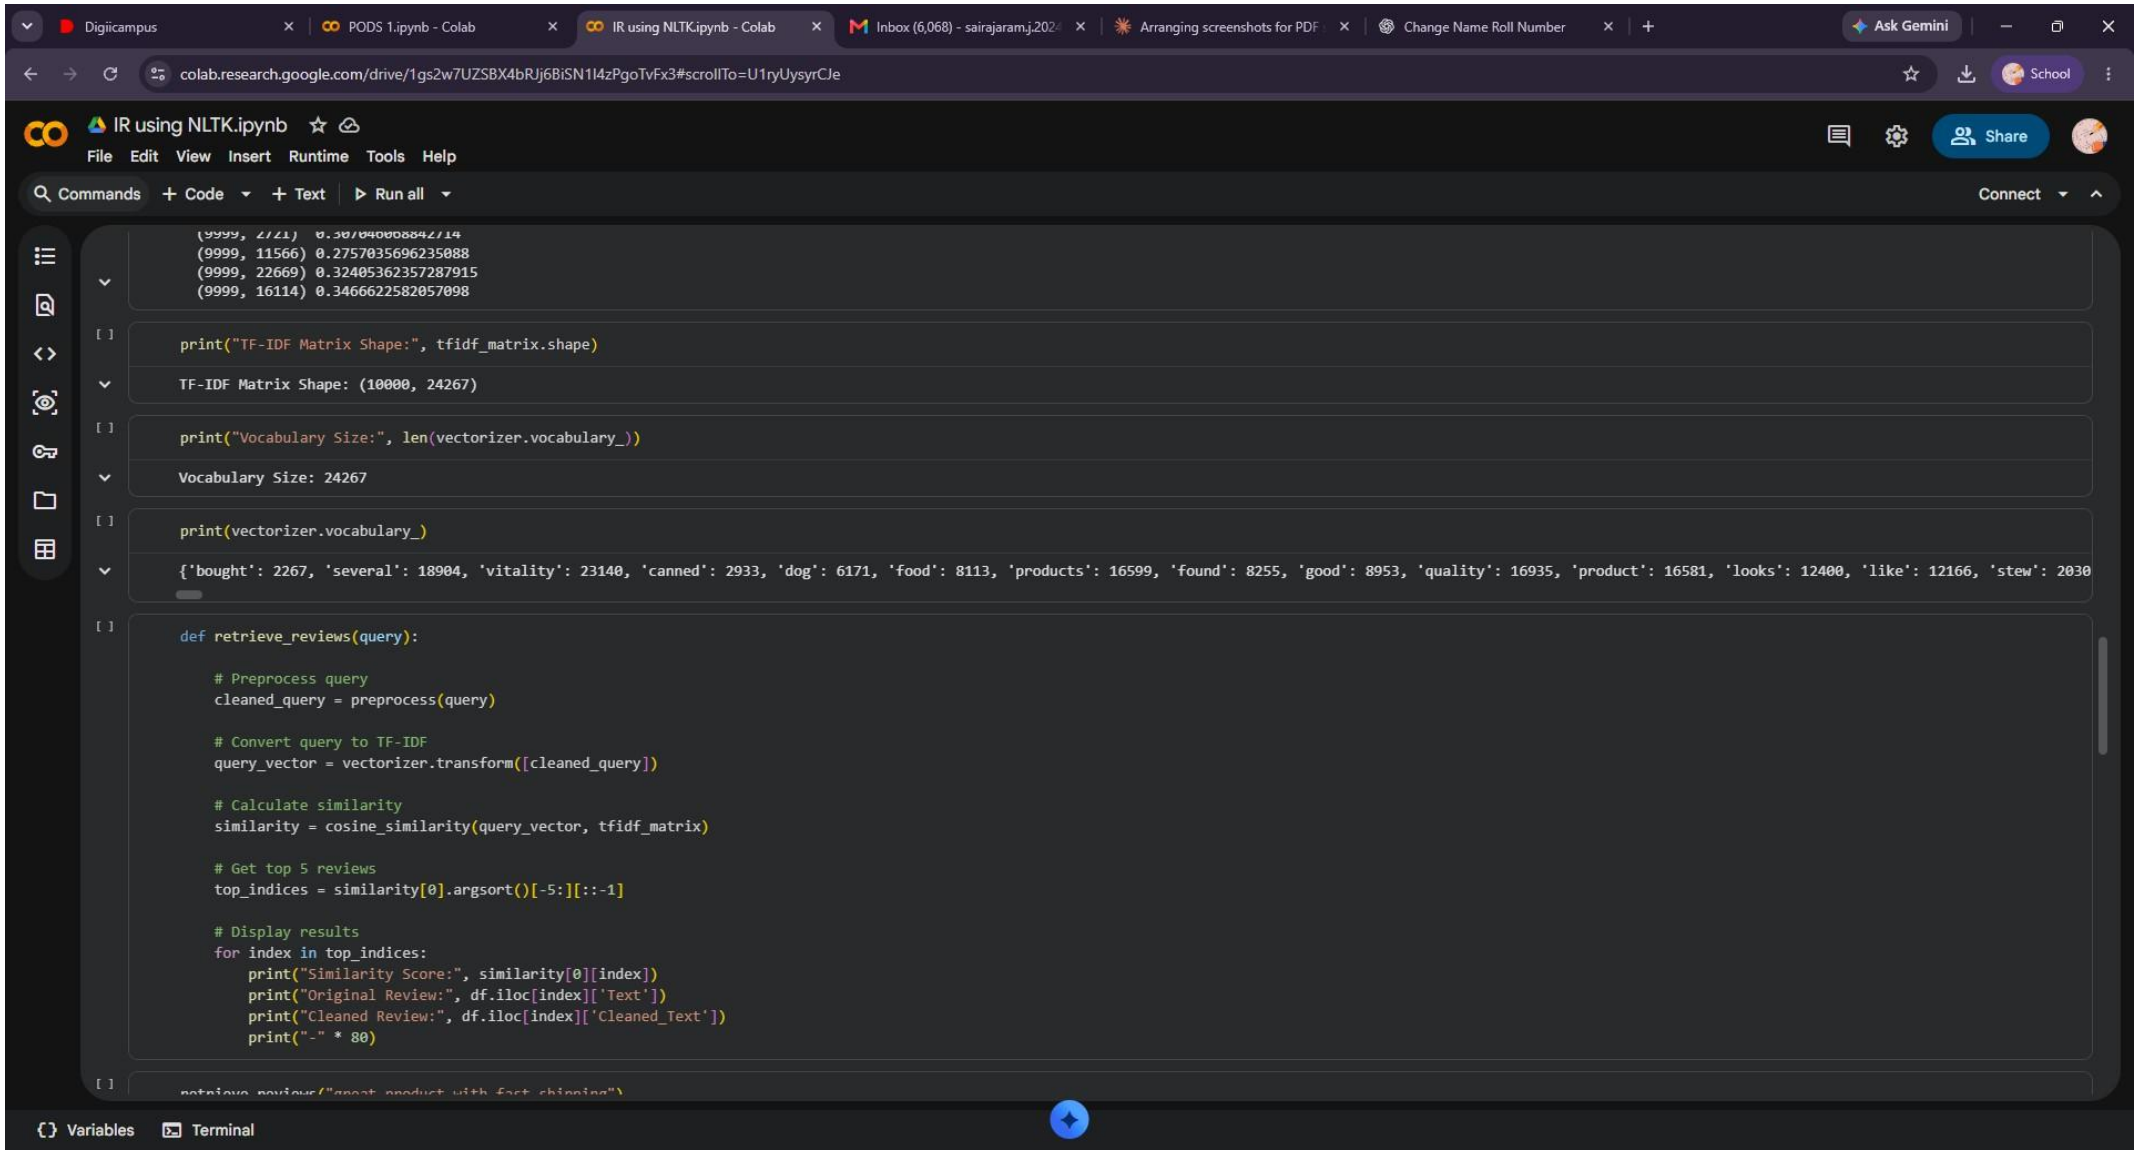

The following pages contain the submitted Google Colab screenshots showing the code and outputs.

	Id	ProductId	UserId	ProfileName	HelpfulnessNumerator	HelpfulnessDenominator	Score	Time	Summary	Text
